Emroth Technologies Pty Ltd

Digital Messages on Hold System

The Emroth Technologies Pty Ltd Digital Messages On Hold system has been developed to provide low cost, high quality digital recording and playback with up to 16 minutes of music, messages and/or advertising. The simple to use record and playback functions make it very easy to record your own messages, background music and/ or advertising and to connect to your phone system.

Features:

- Up to 16 minutes of Sold State digital recording and play back.
- Line level and microphone inputs.
- 100 year retention of messages.
- Low voltage plug pack operation.
- Comes with Royalty free CD with 60 minutes of background music and sample messages.
- All necessary cables supplied for recording and playback.
- Line level/ headphone level output.
- Continuous play back looping.

Description of Operation:

To play, connect to the music input or audio line level input on your telephone system to the Message On Hold Module "Line Out" using the supplied cable. Press the start button. The sample message or your recorded message will start to play. When the message comes to an end it will start at the beginning again. If you want to listen to the message/ music without connecting to your telephone system, plug the set of supplied Headphones into the "Line Out" connector on the Message On Hold module.

To record just connect up the Message On Hold Module "Line In" to a suitable sound source (such as a CD player, PC sound card, etc) using the supplied cable. Press the Erase button and then the Start Button. Music will start to be recorded. You can connect both a music sound source (CD Player, etc) and a microphone at the same time. This allows you to record both background music as well as messages. Press the stop button when you have finished. If you are not happy with the message, record it again.
