

Emroth Technologies Pty Ltd

Talking Information Bollard

The Emroth Technologies Pty Ltd Audio Information Bollard is a touch or proximity activated system. The Audio Information Bollard will start to play pre-recorded information once touched or when close proximity occurs, depending on settings. The audio can be up to 16 minutes for a single message or 16 sequenced/random 1 minute messages. The unique case aluminum design reflexes the audio out and upward. The Audio Information Bollard can be used for many applications from tourist information through to public/ private area advertising.

Features:

- Up to 16 minutes of Sold State digital messages on hold.
- 100 year retention of messages.
- Low voltage operation.
- Rugged cast construction, tamper resistant hardware and the option of a concrete base.
- Professional voice (multi language), music and sound effect service available.
- Options for solar panel/ battery operation.
- Sensitivity adjustment from solid touch to "Walk By" activation.
- Bollard is designed to be a formidable opponent to casual vandalism.
- Message module can be easily exchanged to change messages.
- Continuous play back looping.

Description of Operation:

Once the Bollard is touched or approached, depending on sensitivity adjustment the Bollard will play either a single message or one of the random messages. The sensitivity can be set from touch to proximity detection of 1 m. When the message comes to an end it will start at the beginning

again. The Bollard can be configured to wait a set period of time before playing the message again. The messages are held in message module and this can be readily exchanged for new messages.

The Bollards can be set up in a group for different languages and a language symbol can be engraved on the top surface. The Bollard can be configured so that only one Bollard can play at a time.
